GENERAL INFORMATION

Established in: 1958

Geographical location: 17°46'50''E, 49°56'12''N

Altitude: 336-354 m

Area: 23 hectares

CLIMATIC CONDITIONS (OPAVA)

Annual mean temperature (1876-1975): 8,2°C

Annual rainfall (1876-1975): 621 mm

^{*)} The picture from title page displays flowers of Winter Jasmine *Jasminum nudiflorum* Lindl. growing in the Arboretum Nový Dvůr (Lička, 3. 4. 2011)

HISTORY OF THE ARBORETUM NOVÝ DVŮR

The Arboretum Nový Dvůr (AND) was found on the base of the original collection of woody plants of its founder Mr. Quido Riedel (1878 -1946) who established the park in English style inclusive of romantic elements around its 1,5 large landed estate and residency. The park was built up between the years of 1906 and 1928 when its founder gives over all his property to his daughter.

And so the park has still been maintained, but it is no more extended as for planting up to 1945. The family was turned out after the war and the abandoned property and park was managed by different administrators and organizations. The park in Nový Dvůr has been remaining without any maintenance up to 1957. At the time of research of parks in the region of Opava, the botanists from the Slezské zemské muzeum (Silesian Regional Museum) proposed to establish an arboretum resulting from the, at that time, well-preserved park.

The Arboretum Nový Dvůr was founded on January 1st, 1958 under the administration of the Silesian Regional Museum. An important sanitation began in February 1958 as for the air-raided woody plants and maintenance of the park.

After 1960, the AND develops in its premises programs for collections, research and educational programs, it establishes also a collection of herbariums, specialized groups of woody species and expert library. The AND enlarges also its collection in dendrology and makes it accessible for visitors all over the year and, step by step, the Arboretum Nový Dvůr builds up the premises of Arboretum with the silvicultural background, greenhouse and services for visitors into the form of today. The issue of the first Index Seminum has been dated since 1960.

SEEDS COLLECTED IN THE ARBORETUM NOVÝ DVŮR

GYMNOSPERMAE

CUPRESSACEAE

- Having any problem with opening this file please ask for hard copy of IS at the post address: ARBORETUM NOVÝ DVŮR, SLEZSKÉ ZEMSKÉ MUZEUM, 746 01 OPAVA, CZECH REPUBLIC.
- Please fill in a form of DESIDERATA 2011/2012 in full details.

Obr. 8: Rosy purple flowers of Mezereon *Daphne mezereum* L. from the Arboretum Nový Dvůr (Lička, 13. 3. 2011)

AGREEMENT ON THE SUPPLY OF LIVING PLANT MATERIAL¹ FOR NON-COMMERCIAL PURPOSES LEAVING THE INTERNATIONAL PLANT EXCHANGE NETWORK

Against the background of the provisions and decisions of the Convention on Biological Diversity of 1992 (CBD) and in particular those on access to genetic resources and benefit-sharing, the garden is dedicated to promoting the conservation, sustainable use, and research of biological diversity. The garden therefore expects its partners in acquiring, maintaining, and transferring plant material to always act in accordance with the CBD and the Convention on the International Trade in Endangered Species (CITES).

The responsibility for legal handling of the plant material passes on to the recipient upon receipt of the material. The requested plant material will be supplied to the recipient only on the following conditions:

1. Based on this agreement, the plant material is supplied only for non-commercial use such as scientific study and educational purposes as well as environmental protection. Should the recipient at a later date intend a commercial use or a transfer for commercial use, the country of origin's prior informed consent (PIC) must be obtained in writing before the material is used or transferred. The recipient is responsible for ensuring an equitable sharing of benefits.
 2. On receiving the plant material, the recipient endeavours to document the received plant material, its origin (country of origin, first receiving garden, „donor“ of the plant material, year of collection) as well as the acquisition and transfer conditions in a comprehensible manner.
 3. In the event that scientific publications are produced based on the supplied plant material, the recipient is obliged to indicate the origin of the material (the supplying garden and if known the country of origin) and to send these publications to the garden and to the country of origin without request.
 4. On request, the garden will forward relevant information on the transfer of the plant material to the body charged with implementing the CBD².
 5. The recipient may transfer the received plant material to third parties only under these terms and conditions and must document the transfer in a suitable manner (e.g. by using the documentation form, such as provided in Annex 1.3).
- I accept the above conditions.

Date, Signature

Recipient's name and address, stamp

¹ According to the CBD "genetic resources" means genetic material of actual or potential value. This definition covers both living and not living material. The Code of Conduct and the IPEN covers only the exchange of living plant material (living plants or parts of plants, diaspores) thus falling in the definition of genetic resources.

² ideally, the national focal point in the garden's home country
